## Environmentally Destructive NFTs?

If you believe environmentalists don't like cryptocurrency, wait till you hear what gaming devs think of Non Fungible Tokens. By and large gaming organizations are interested in potential of utilizing NFTs in their games, as they provide both revenue opportunities as well as creative potential.

However, game developers see gamers' exploitation as offering a well-off unfair leg up, utilizing a scan-ridden and environmentally destructive technology. And as games such as Fortnite's strategy to evolve into a wider metaverse platform, that dislike could move devs away from blockchain technology as the framework for immersive VR worlds.

Metaverse projects such as Decentraland and Sandbox are developed entirely of NFTs, that are crypto tokens that can hold several kinds of media which are both distinct and immutably recorded on blockchain.

Gaming organizations have welcomed several of the use cases cryptocurrency punters have advanced, ranging from rare skins for in-game avatars to genuinely usable items — like a Kilo assault rifle — which could either be sold or given away.

## Setting Inevitable Apart

Essentially, commitment comes down to not generating an economy relying upon NFT trade, whether those are sales by gaming studios or by gamers to each other.

More importantly, it would deny blockchain as a game development program, calling for a restriction on eco-unfriendly techs — like PoW tokens such as Bitcoin — and requiring that organizations “not depending on volatile, unregulated crypto assets.

What are NFTs? — they are kind of digital assets developed on polluting ethereum blockchain. That said, the commitment also identifies the addition of NFT to several games as inevitable.

This inevitability is not mandatorily as robust as Minecraft developer Scheviak and Mariana Salimena, a conceptual artist in Minecraft, may think.

During previous 6 months, gaming studios such as makers of MetaWorms and STALKER 2 canceled NFT projects after fans backfired.

Back in February, EA or Electronic Arts CEO backtraced while on earnings call, said that it “remain to be seen” in case it develop and utilize NFTs.

In the end, we should take the example of Fortnite, which is a great deal in metaverse element, as it pioneered concerts by artists such as Ariana Grande and Travis Scott that lured a plethora of fans, and generated millions of dollars.
