

Top 12 Proxy Websites for Anonymous Browsing in 2022

The use of proxy websites and VPN services is contentious. Why would you want to browse the web anonymously? What do you want to hide? Only criminals want to hide their online activity, right?

Truth be told, it's not that straightforward. Sure, some people want to browse the internet anonymously for illegal activities. Though, there are those who need to do legitimate work and unfortunately they might not be able to access a specific website because a website owner has decided to block all IP addresses from their country.

There are numerous reasons why some countries, educational institutions or businesses choose to block certain websites. While the reason why a country would go this route might be more difficult to make sense of (and a can of worms we're not going to open, especially not considering the current political turmoil), it's pretty easy to understand why your employer would want to block access to Facebook or YouTube. If your job description doesn't include social media management or content creation, you'll have a hard time coming up with a reason why you should be on Facebook during office hours.

To help you carry on with your legitimate work, we've compiled this list of 12 of the leading proxy websites that you can use for anonymous browsing. Some of them are free; some of them have very outdated interfaces that you'll need to look past. As you would expect, usually it's those free options with the plain-looking interfaces, so it might be easier to ignore their design flaws. From A(nonymouse) to Z(yte), here are the proxy websites that you can use in 2022 not to fool your bosses, but impress them with your research that left no stone unturned (or site unopened).

Top 12 Proxy Websites for Anonymous Browsing in 2022:

12 of the Best Proxy Websites

1. Anonymouse

Since 1997, Anonymouse has helped users to protect their data and privacy. Not only is it straightforward to use, but it's also free.

For a higher download limit, an encrypted connection, and faster performance, you can sign up for its VIP membership. If you first want to test it out, it offers a one-month membership for only \$6.

2. GeoSurf

GeoSurf offers six tools to help your business succeed in the digital world. For example, if you want to use a proxy website for social listening to keep track of your online brand's performance, you can check out GeoSurf's Residential IPs solution.

When you're using a scraping tool to scrape the web for info, there's a big possibility that the target sites will detect and block you. Using a proxy server, like GeoSurf, that allows you to use and rotate between residential IPS is one of the most common ways to prevent getting blocked.

Not only will you gain access to millions of residential IP addresses from across the globe, but it's also very simple to use. To change your location takes just a single click.

Key features include:

- More than two million clean, residential IPs
- 130 geo locations including Germany, Canada, the United States, and Mexico
- Comprehensive statistics about usage

Pricing: Pricing starts at \$450 per month.

3. KProxy

Since KProxy was launched in 2005, more than 1.5 million people have used it to dodge hackers, bypass filters, and surf the web privately. You can either download the KProxy extension for free or upgrade to KProxy Pro. By signing up for one of its paid plans, you'll enjoy an ad-free experience, unlimited access, and overall a faster performance. That said, its free extension works just fine and the fact that you can use it free of charge is one of the main reasons why it's so popular.

In short, it will change your IP address when you're sending traffic to the internet. This way, your identity will remain hidden which means that you can, for example, access content back home while you're traveling in another country. It's also useful if you want to use public Wi-Fi connections as it can help to prevent hackers from accessing sensitive info like passwords and credit card details.

Key features include:

- No installation required

- Add-ons for Firefox and Microsoft Edge
- Available in the Chrome web store

Pricing: While it's available for free, it's Basic plan costs only \$5 for 10 days.

4. HMA

Sometimes in order to stay in business, you need to keep other people out of your business. And that's what HMA (initially called HideMyAss) makes their business. If you're thinking that the previous name sounds like something that a teenager would come up with, you'd be very much correct. HMA started in 2005 when the then 16-year-old Jack Cator was searching for a way to bypass his school's firewalls. Fast-forward 17 years and the company Privax that was founded and owned by Jack was sold to AVG Technologies for \$40 million.

It has a number of advanced features that deserve special mention. Firstly, there's the Smart Kill Switch. This feature will ensure that your internet gets switched off automatically in the event that your VPN connection gets interrupted for uninterrupted privacy protection. This way, your location or data won't get exposed. Then, there's the split tunneling. This feature lets you choose for which apps you want to use VPN protection.

To use their words, with them, the internet is truly borderless. Plus, they have many other features planned for the future that include man-in-the-middle detection which will make it possible to scan for attacks on the networks you would like to connect to.

Key features included:

- Automatic connection rules
- Fully-encrypted servers
- DDoS protection
- P2P-optimized servers
- Simultaneous connections (you can have as many as five devices connected at the same time)

Pricing: Pricing for a 12-month plan starts at only \$4.99 per month. Plus, if you choose to be billed annually you can save as much as 58%.

5. CroxyProxy

If you're searching specifically for a tool that works with video websites, be sure to check out CroxyProxy. While its technology lets you access most modern sites and web apps, it works great as a YouTube proxy and offers full support for HTML5 audio and video playback. Plus, it won't change the look and feel of YouTube that you've grown used to. All you need is a web browser, CroxyProxy, and you'll be able to enjoy millions of audio and

video clips irrespective of where you find yourself in the world.

While it's available completely free of charge, it also offers premium access. By signing up for its premium plan at \$3.50 per month, you enjoy an ad-free experience and use the fastest server from the United Kingdom, Germany, Finland, Israel, Canada, or the US.

6. Whoer

The goal of Whoer.net is to verify the info that your PC sends to the web. You can, for example, use it to check proxy servers, offer details about your VPN server, and scan black lists for your IP address.

If you specifically want a tool that will help you to access any website irrespective of your location, it also offers a VPN that you can check out. While they offer a limited free VPN plan, it will only offer you access to the Netherlands server. On the other hand, the Premium account offers you much more functionality that includes access to servers in over 20 countries.

Key features include:

- Traffic encryption
- No speed limit
- Five simultaneous connections
- No logs policy
- IP hiding and anonymity

Pricing: Pricing starts at \$9.90 per month if you sign up for its one-month plan. Though, if you opt for the 12-month plan, you can save as much as 60%.

7. Hideoxy

If you don't need all the bells and whistles and you're simply interested in a free online proxy server that lets you browse the web anonymously, you can check out Hideoxy. It's completely free and you also don't have to complete any annoying registration forms in which you need to share your email address. That said, unlike a tool like Whoer, you need to keep in mind that they log all users' activity to protect them from bad users that will abuse their web proxy service.

8. Megaproxy

To use Megaproxy, you need only a web browser and an internet connection. There's no need to download and install any browser plugins or software first. It offers a wide range of features that include a set of user-customizable internet privacy and web security options, a web-based private bookmark organizer, and online internet cooking management.

While it's aimed at all internet users, they also specifically target journalists, investigative reporters, and students. As info found on the internet can be changed based on factors like the source of the originating connection, it's especially useful for anyone who works in the academic and research industry. For example, its hiding feature will reduce the impact of common page cloaking techniques.

Key features include:

- Encrypted web access from any browser
- 128-bit SSL encrypted WLAN security

Pricing: Pricing for three months' access is \$9.95.

9. VPNBook

VPNBook is similar to Megaproxy. Both use a web browser which means that you don't need to download and install any extra software. Both have horrible interfaces.

Though, what matters is how it gets the job done and that you don't have to pay anything. Not only is it built for speed, but it also uses the strongest encryption techniques such as AES-256 and AES-128.

Key features include:

- VPN servers have their own dedicated hardware
 - No internet browsing traffic gets stored
 - No bandwidth limits
-

10. Hidester

If you're searching for a proxy server that's simple to use on a mobile device, you can also check out Hidester. Not only is it simple to use, but also safe. Thanks to its automatic SSL technology, you'll be kept safe from potential hackers, even when using public Wi-Fi connections.

Many of the other solutions mentioned on our list are also free, but then you need to navigate your way around ads. This is not the case with Hidester. With Hidester, you don't need to pay anything to get rid of ads.

In addition to its main feature, it also offers other useful additional features like a password generator and a browser fingerprint test. While you'll probably not need to check your browser's fingerprint, everyone needs help with creating strong passwords. Your dog might be fierce, but it's name is going to do little to protect your social media accounts.

Key features include:

- 128-bit encryption
 - No logs are stored
-

11. ProxyScrape

If you're searching for a dedicated proxy, you can check out ProxyScrape. In addition to millions of residential proxies, ProxyScrape also offers dedicated proxies that are only used by you. Whether you need only five dedicated proxies or 200, they offer a number of packages that start at only \$6.50.

Key features include:

- A pool of more than 7 million residential proxies
 - 99% uptime
 - Unlimited bandwidth
 - 40,000 datacenter proxies
-

12. Zyte

If you specifically need a proxy server for scraping web data, be sure to check out Zyte. Thanks to their smart rotating proxies, residential proxies, and advanced ban handling solutions, it becomes easier to get the web data that you're after. Plus, you can rest assured knowing that everything is ethically sourced and ethically used. All their residential proxy IPs are sourced via carefully selected partners that are further bound by a due diligence process.

To give you an idea of their success in numbers, per day they validate about 10 million records. Per month, more than 10 billion pages get extracted. All in all, they boast a success rate of 99.9%.

Key features include:

- Hundreds of thousands of proxies from all over the world
- Automatic IP selection and rotation
- Geolocation
- Visualizations and reporting

Pricing: Pricing starts at \$29 per month for their Smart Proxy Manager.
